ShanghaiRanking's Academic Ranking of World Universities 2023

NYCU is ranked 425th, showing stability and progress

The ShanghaiRanking's Academic Ranking of World Universities (ARWU) annually ranks over 2,500 universities worldwide and releases rankings for the top 1,000 universities. In the latest ranking published on August 15th, NYCU improved its position, moving up from 432nd place last year to 425th place in the global rankings. This year, Taiwan has five universities in the top 500, namely National Taiwan University (ranked 222nd), China Medical University (ranked 251st), National Cheng Kung University (ranked 357th), National Yang Ming Chiao Tung University (ranked 425th), and National Tsing Hua University (ranked 479th).

Unlike the QS and THE rankings, the ARWU ranking places a strong emphasis on top-tier academic research achievements and awards. The evaluation criteria mostly focus on totals without considering the size of the institution or the distribution of disciplines. The ARWU ranking uses six indicators, which include award-winning alumni (10%), award-winning faculty (20%), highly cited researchers (20%), papers in Nature and Science (20%), papers indexed in Science Citation Index-Expanded and Social Science Citation Index (20%), and per capita performance (10%).
