中文摘要 .....	I
英文摘要 .....	II
誌謝 .....	IV
CONTENT .....	V
TABLE LIST .....	1
FIGURE LIST .....	2
CHAPTER 1 INTRODUCTION.....	7
CHAPTER 2 SEMI-SOLID METAL FORMING .....	11
2.1 What is Semi-Solid Metal Forming (SSMF).....	11
2.2 Procedures of conventional SSMFs.....	24
2.3 Applications of SSMF .....	29
CHAPTER 3 A NOVEL CONCEPT OF SEMI-SOLID FORMING OF HYPEREUTECTIC AL-SI-X BY POWDER THIXOCASTING .....	31
3.1 Motivation .....	31
3.2 Hypereutectic Al-Si-X alloys.....	31
3.3 What is Powder Thixocasting .....	33
3.4 Prior Arts of Metal Forming that Combining PM and SSMF .....	34
3.5 Powder Thixocasting vs. Powder Forging.....	37
CHAPTER 4 ASSESSMENT OF NET-SHAPE FORMING OF AL-25SI-2.5CU-1MG ALLOY BY POWDER THIXOCASTING .....	39

4.1 Motivation .....	39
4.2 Experimental.....	40
4.2.1 Preparation of Al-Si-Cu-Mg powder .....	40
4.2.2 Procedures of Powder Thixocasting .....	42
4.2.3 Examinations of Material Properties .....	51
4.3 Results and Discussions.....	53
4.3.1 How to Prepare the Powder Preforms Efficiently .....	53
4.3.2 Liquidizing Behaviors of the Powder during Heating to Semi-Solid State .....	58
4.3.3 Kinetics of Si Grain Growth in Semi-solid State.....	62
4.3.4 How to Eliminate Oxide Films and Pore Defects.....	70
4.4 Demo Part Fabrication.....	79
4.5 Conclusions .....	83
CHAPTER 5 MICROSTRUCTURES AND STRENGTH OF POWDER-THIXOCAST AL-25SI-2.5CU-1MG AND AL-20SI-5FE ALLOYS .....	85
5.1 Motivation .....	85
5.2 Experimental.....	85
5.2.1 Materials preparation .....	85
5.2.2 T6 Heat treatment .....	89
5.2.3 Properties examination .....	89
5.3 Results and Discussions.....	90
5.3.1 Microstructure.....	90
5.3.2 Tensile properties and microhardness.....	99

5.3.3	Compression strength at elevated temperature .....	105
5.4	Conclusions .....	108
CHAPTER 6	DRY SLIDING WEAR BEHAVIORS OF POWDER-THIXOCAST AL-25SI-2.5CU-1MG AND AL-20SI-5FE ALLOYS.....	109
6.1	Motivation .....	109
6.2	Introduction of metal wear .....	109
6.2.1	Types of metal wear.....	109
6.2.2	Surface damages in sliding wear .....	111
6.2.3	Some theories about sliding wear of metals .....	112
6.3	Experimental.....	119
6.3.1	Materials .....	119
6.3.2	Sliding wear tests.....	120
6.4	Results .....	122
6.4.1	Wear rate and coefficient of friction .....	122
6.4.2	Surface roughness of discs and pins after wearing.....	127
6.4.2	Worn surfaces and subsurface of Al-Si-X sliding pins.....	129
6.4.2	Wear debris from the Al-Si-X/ steel sliding wear system.....	140
6.3.3	Bulk surface sliding temperature .....	142
6.5	Discussions .....	143
6.5.1	Wear behaviors at low loading conditions (region I).....	143
6.5.2	Wear behaviors at high loading conditions (regions II/III).....	146
6.5.3	Estimation of the flash sliding-surface-temperature.....	151
6.5.4	A proposed mechanism for wear behaviors of the Al-Si-Cu-Mg Alloys.....	153

6.6 Conclusions .....	156
CHAPTER 7 GENERAL CONCLUSIONS .....	158
CHAPTER 8 FUTURE WORKS .....	162
REFERENCES .....	164
PUBLICATION LIST.....	175
作者介紹 .....	177

## TABLE LIST

Table 2.1 Metal forming processes and their major problems.....	22
Table 4.1 Chemical compositions of the hypereutectic alloy powder.....	40
Table 4.2 Particle size distributions of the three fractions of the gas atomized Al-Si powder.....	41
Table 4.3 The relative densities (%) of the green powder compacts consolidated at different temperatures and with different sizes of powders.....	55
Table 4.4 Possible reactions during solidification of the Al-25Si2Cu1Mg alloy.....	60
Table 4.5 Grain sizes of primary Si particle ( $\mu\text{m}$ ).....	65
Table 4.6 Densities of powder-thixocast Al-25Si-2.5Cu-1Mg specimens. ....	72
Table 4.7 Ultimate tensile strengths (MPa) of the Al-25Si-2.5Cu-1Mg-0.5Mn.....	73
Table 5.1 Chemical compositions of the Al-Si-X alloys.....	86
Table 5.2 Possible reactions during solidification of Al-20Si-5Fe alloy.....	88
Table 5.3 Tensile properties and hardness of the Al-Si-X alloys (PT=powder thixocasting; IT=ingot thixocasting).....	100
Table 6.1 Surface roughness values ( $R_a$ , $\mu\text{m}$ ) measured on the worn pins and discs after seizure .....	127

## FIGURE LIST

Figure 2.2	Schematic diagrams of dendritic grains .....	12
Figure 2.3	Concentration and temperature fields of dendrite .....	13
Figure 2.4	Schematic evolution of solidified crystal with vigorous agitation.....	15
Figure 2.5	Model of grain boundary fragmentation mechanism .....	15
Figure 2.6	Semi-solid state aluminum alloy with non-dendritic solid grains.....	16
Figure 2.7	Methods of producing non-dendritic materials for SSMF .....	17
Figure 2.8	Schematic flow of a semi-solid metal slurry under a shear stress. ....	18
Figure 2.9	Typical flow viscosity curves.....	19
Figure 2.10	Plastically deforming a semi-solid metal slurry. ....	19
Figure 2.11	Flow front of a fully liquid and a semisolid slurry .....	21
Figure 2.12	Hot tear cracks exist at the corner of a squeeze casting part (right) in magnesium alloy (AZ91).....	22
Figure 2.13	Liquid fraction vs. temperature for some aluminum alloys.....	23
Figure 2.14	Eutectic binary phase diagram, showing mushy zone temperature in (S+L) (solid and liquid and the comparison between rheo- and thixo- semisolid processes .....	24
Figure 2.15	Cooling curves of metals in various shaping processes, showing the comparison between rheo- and thixo- semisolid processes .....	25
Figure 2.16	Procedures of conventional thixocasting.....	26
Figure 2.17	Procedures of New Rheo-Casting (NRC) process (UBA, Japan) .....	27
Figure 2.18	Schematic diagram of Thixomolding ® apparatus invented by Dow Chemical .....	28
Figure 2.19	Schematic diagram of the screw-barrel injection system of a rheomolding machine invented by Cornell Research Fundation. ....	29
Figure 2.20	Applications of SSMF.....	30
Figure 3.1	Binary phase diagram of Al-Si alloy .....	32
Figure 3.2	Schematic diagram of the powder thixocasting process.....	34

Figure 3.3	Schematic diagram of COMPASS (Consolidation of Mixed Powders as Synthetic Slurry) .....	35
Figure 3.4	Schematic diagram of SSPD (Semi-Solid Powder Densification) process.	36
Figure 3.5	Schematic drawing of powder forging process .....	37
Figure 4.1	(a) SEM morphology and (b) optical microstructure of the gas-atomized hypereutectic Al-Si powder .....	41
Figure 4.2	Schematic diagram of the powder thixocasting process.....	42
Figure 4.3	Schematic diagram of the apparatus layout for thixocasting process .....	43
Figure 4.4	Temperature increasing curve of the Al-Si powder during preheating up to 500°C.....	44
Figure 4.5	Oil-hydraulic pressing machine used for powder consolidation and squeeze casting. ....	45
Figure 4.6	Semi-solid feedstock heating station with five induction coils .....	46
Figure 4.7	A suitable power-time heating program used in heating the powder performs into semi-solid state.....	47
Figure 4.8	Melt beads formed on a semi-solid powder preform.....	48
Figure 4.9	Thixocasting machine with clamping force of 5,000 kN.....	49
Figure 4.10	Injection system comprising a sleeve and a plunge.....	49
Figure 4.11	(a) Schematic diagram and (b) dimensions of the mold cavity for powder thixocasting .....	50
Figure 4.12	Photo of a powder thixocast specimen.....	51
Figure 4.13	(a) Locations and (b) dimensions of the tensile specimens. ....	52
Figure 4.14	Photograph of the high-temperature consolidated powder preforms. ....	54
Figure 4.15	Optical microstructures of the green powder compact .....	56
Figure 4.16	Differential thermal analyses (DTA) scan of the hypereutectic Al-25Si-2.5Cu-1Mg powder. ....	59
Figure 4.17	The Al-Si-Cu isothermal phase diagram at 560°C [36] .....	62
Figure 4.18	Optical microstructures of the as-atomized Al-25Si-2.5Cu-1Mg- 0.5Mn	

powders .....	63
Figure 4.19 Optical microstructures of the as-atomized Al-25Si-2.5Cu-1Mg- 0.5Mn powders after isothermally heat-treatment at (a) 500 °C, (b) 550 °C, and (c) 600 °C, for 1 hour. ....	64
Figure 4.20 Evolution of the average Si grain sizes (d) as a function of isothermal-heat treatment temperatures and time intervals in the Al-25Si-2.5Cu-1Mg-0.5Mn powders.....	67
Figure 4.21 Si grain growth versus the inverse of isothermal heat-treatment temperatures. ....	68
Figure 4.22 Schematic diagrams of diffusion paths for Si grain growth .....	69
Figure 4.23 Pull-out of powder particles observed on a tensile fractograph of a powder-thixocast specimen.....	73
Figure 4.24 Optical micrographs of the powder thixocast sample.....	74
Figure 4.25 Optical micrographs of the powder thixocast sample.....	75
Figure 4.26 Plastic deformation at semisolid state of a powder preform.....	78
Figure 4.27 Extrusion methods, (a) conventional extrusion, (b) double shear extrusion [99] .....	80
Figure 4.28 (a) Equal channel angular extrusion, (b) simulation by finite element, $\varphi = 45$ [100] .....	80
Figure 4.27 A powder-thixocast compressor Al-25Si-2.5Cu-1Mg scroll .....	82
Figure 5.1 A typical DTA scan spectrum of Al-20Si-5Fe powder. ....	88
Figure 5.2 (continued).....	93
Figure 5.2 Typical optical micrographs of Al-25Si-2.5Cu-1Mg alloy .....	94
Figure 5.3 Typical optical micrographs of Al-20Si-5Fe alloy .....	95
Figure 5.4 Optical microstructures of as-prepared conventional Al-Si alloys. ....	97
Figure 5.5 Optical microstructures of T6-treated conventional Al-Si alloys. ....	98
Figure 5.6 Typical stress-strain curves of Al-25Si-Cu-Mg (PT).....	101
Figure 5.7 Tensile fractographs of the powder-thixocast specimens .....	104

Figure 5.8 Compressive stress-strain curves of as-prepared Al-Si-X alloys. ....	107
Figure 5.9 Compressive strength of the as-prepared Al-Si alloys varied with temperature. .....	108
Figure 6.1 Schematic depiction of a wearing system .....	110
Figure 6.2 Classification of wear processes .....	110
Figure 6.3 Schematic description of the four main wear mechanisms.....	111
Figure 6.4 Mechanisms of wear during sliding contact.....	112
Figure 6.5 Schematic diagrams show Archard's adhere wearing model.....	113
Figure 6.6 A schematic view of the metal being removed under a circular wear track in pin-on-disk type wear tests .....	115
Figure 6.7 The process of wear particles formation by the shear deformation of the voids .....	115
Figure 6.8 An idealized model for the seizure mechanism.....	117
Figure 6.9 Schematic four types of second phase during sliding wear.....	118
Figure 6.10 Typical wearing curves show different wearing stage .....	119
Figure 6.11 Schematic illustration of pin-on-disk friction testing apparatus .....	121
Figure 6.12 Wear rates varied with load for the (a) as-prepared and (b) T- treated Al-Si-X alloys. The three regions denoted by I, II, and III are shown for Al-25SiCuMg (PT) alloy. ....	123
Figure 6.13 Coefficients of friction varied with sliding time for as-prepared (a) Al-25SiCuMg (PT) and (b) LM13 alloys.....	125
Figure 6.14 Coefficients of friction varied with load for (a) as-prepared and (b) T6-treated Al-Si-X alloys. ....	126
Figure 6.15 Photographs of the disc after sliding wear tests. ....	128
Figure 6.16 Surface roughness curves of discs (a) before wearing, (b) after sliding with Al-25SiCuMg (PT), (c) Al-25SiCuMg (IT), and (d) LM13 T6-treated alloys. ....	128
Figure 6.17 XRD on the worn surfaces of as-prepared Al-25SiCuMg (PT).....	129
Figure 6.18 XRD analyses obtained on the worn surface of the Al-20Si-5Fe (PT) alloy	

	(a) before wear and (b) 116N. ....	130
Figure 6.19	A typical worn surface of Al-Si-X pin after sliding at low loads.....	132
Figure 6.20	A typical worn surface of Al-Si-X pin after sliding at high loads.....	134
Figure 6.21	A cross-section of a Al-SiCuMg(PT) surface worn at high loads.....	136
Figure 6.22	OM micrographs of the cross-sections of the worn surfaces.....	138
Figure 6.23	OM micrographs of the cross-sections of the worn surfaces.....	139
Figure 6.24	A typical SEM micrographs of wear debris from Al-25SiCuMg (PT)/steel wearing system .....	141
Figure 6.25	Variation with load of sliding surface temperature for the as prepared Al-Si-Cu-Mg alloys. ....	142
Figure 6.26	Schematic diagrams of the cross sections perpendicular to the sliding surfaces at low loads. ....	145
Figure 6.27	Schematic diagrams of the cross section perpendicular to the surface sliding under heavy load for the hypereutectic Al-Si alloys. ....	148
Figure 6.28	Fragmentation process of Si particles by shearing deformation .....	148
Figure 6.29	Schematic plots of wear rate as a function of sliding load for powder-thixocast and conventional alloys. ....	156
