Contents	L9
Table Lists	L13
Figure Captions	L15
Chapter 1 Introduction	1
1.1 Direction of low-temperature poly-Si (LTPS) TFT technology.....	2
1.2 Key Processes in the fabrication of LTPS TFTs.....	6
1.2.1 Solid-phase crystallization.....	6
1.2.2 Metal-induced crystallization.....	7
1.2.3 Excimer laser annealing (ELA).....	10
1.2.4 Deposition of gate dielectric thin films.....	13
1.2.5 Defect passivation.....	14
1.3 Motivation.....	15
1.4 Thesis organization.....	17
Chapter 2 Device Transfer Technology for Fabricating TFTs on the Plastic Substrate	19
2.1 Critical issues for fabricating TFTs on plastic substrates.....	19
2.1.1 TFT process at extremely low temperature < 200°C.....	19
2.1.2 Mask alignment.....	20
2.1.3 Thermal-mechanical problems with plastics.....	21
2.2 Direct approach: fabricating TFTs on plastics with ultra low-temperature process.....	21
2.2.1 Plastic substrates and their properties.....	21
2.2.2 Barrier layers and thermal pre-treatment for plastic substrates.....	23
2.2.3 Technology for thin-film deposition, crystallization and dopant activation at ultra low temperature.....	25
2.3 Indirect approach: fabricating TFTs on plastics by transfer/substrate bonding.....	25
2.3.1 Surface free technology by laser ablation (SUFTLA).....	26
2.3.2 Device transfer by wet chemical etching.....	27
2.3.3 Transfer of single crystalline silicon.....	29
2.4 Experimental: poly-Si TFTs manufactured on rigid substrate using device transfer by backside etching technology.....	31

2.4.1	Sample preparation.....	31
2.4.2	Bonding process.....	34
2.4.3	First step thinning process by CMP.....	35
2.4.4	Second step thinning process by wet chemical etching.....	36
2.4.5	Via hole opening after DTBE.....	36
2.5	Results and discussion: TFT manufactured on rigid substrate by DTBE.....	37
2.5.1	Sample preparation, bonding, etching and related issues.....	37
2.5.2	The observations after DTBE.....	39
2.5.3	Electrical characteristics of poly-Si TFTs before and after DTBE.....	43
2.6	Summary.....	47

Chapter 3 Modified DTBE Technology for Fabricating Thin-Film Devices on Flexible Plastic Substrates.....49

3.1	Introduction to wet chemical etchant of silicon.....	50
3.1.1	Etching mechanism of KOH.....	50
3.1.2	Etching mechanism of HNA system.....	51
3.2	Experimental: device transfer by backside Si thinning with conventional wet chemical etching.....	52
3.2.1	Sample preparation.....	52
3.2.2	The choice of the plastic substrate.....	54
3.2.3	Bonding process.....	55
3.2.4	One-step backside Si etching by wet chemical etching.....	56
3.3	Results and discussion: device transfer by backside Si thinning with conventional wet chemical etching.....	56
3.3.1	Characterization of different Si etchant composed by HNA system.....	56
3.3.2	Characterization of Si etching by KOH.....	58
3.3.3	Observation after DTBE with wet chemical etching.....	59
3.4	Spin-etching technology.....	62
3.4.1	Experimental.....	63
3.4.2	Results and Discussion: spin-etching mechanism, etching rate, selectivity, and uniformity.....	64
3.5	Manufacturing TFTs on flexible substrate by modified DTBE with spin-etching technology.....	70
3.5.1	Fabrication of thin-film devices.....	70
3.5.2	Bonding process and backside Si etching by spin etching.....	72
3.5.3	Observation after DTBE with spin etching technique.....	74
3.5.4	Electrical characteristics of thin-film devices after DTBE.....	76
3.6	Single crystal Si on glass/plastic substrates by DTBE.....	81

3.6.1	Experimental.....	81
3.6.2	Results and discussion.....	82
3.7	Summary.....	85

Chapter 4 Poly-Si TFTs with Elevated Channel and Gate Overlapped Structure by Excimer-Laser Annealing.....88

4.1	Undesired effects of conventional poly-Si TFTs.....	89
4.1.1	OFF-state leakage current.....	89
4.1.2	Floating body effects.....	90
4.1.3	Hot carrier induced degradation.....	91
4.2	Device architecture for high-performance poly-Si TFTs.....	92
4.2.1	Active layer thinning.....	92
4.2.2	Reduction of the drain-side electric field.....	93
4.3	Experimental: fabrication of ECTFT with S-LPD and ELA process.....	95
4.3.1	Selective liquid-phase deposition technology.....	95
4.3.2	Device structure and fabrication of ECTFT.....	97
4.4	Results and Discussion.....	101
4.5	Summary.....	110

Chapter 5 Poly-Si TFTs with Elevated Channel and Gate Overlapped Structure by Metal-Induced Lateral Crystallization.....111

5.1	Experimental.....	112
5.1.1	Elevated channel TFTs with different thickness of active layer.....	112
5.1.2	Elevated channel TFTs with different doping concentration of LDD.....	116
5.2	Results and discussion.....	116
5.2.1	General I-V characteristics of ECTFT without GOLDD structure.....	116
5.2.2	General I-V characteristics of ECTFT with GOLDD.....	124
5.2.3	Kink effect and hot carrier endurance.....	131
5.3	Summary.....	137

Chapter 6 Organic Thin-Film Transistor: Basics, Process Development and Electrical Characteristics.....139

6.1	Basics of OTFTs.....	140
6.1.1	Classification of organic materials.....	140
6.1.2	Deposition process of organic semiconductor.....	141
6.1.3	Conduction mechanism.....	143
6.1.4	Other specific material or circuit considerations.....	145

6.2	Introduction to poly-3-hexylthiophene, P3HT.....	147
6.2.1	The molecular structure of P3HT.....	147
6.2.2	Solvents and purification process for P3HT.....	148
6.2.3	Deposition method and surface morphology.....	149
6.3	Optimization of spin-on conditions of P3HT.....	150
6.3.1	Experimental: sample preparation.....	150
6.3.2	Physical observation after spin-coating P3HT.....	151
6.3.3	Electrical characteristics of OTFTs.....	156
6.4	Structural considerations of OTFTs.....	159
6.4.1	Experimental: sample preparation.....	159
6.4.2	Results and discussion.....	161
6.5	Source/drain metals for ohmic contact with P3HT.....	165
6.5.1	Experimental.....	166
6.5.2	Relationship of S/D metals and the performance of OTFTs.....	166
6.5.3	Effect of adhesion/contact material ratios to the contact resistance.....	170
6.6	Summary.....	172
Chapter 7 Reliability Characteristics of P3HT-Based OTFTs.....		174
7.1	Environmental stability of P3HT-OTFTs.....	175
7.1.1	Experimental: sample preparation.....	175
7.1.2	Results and Discussion.....	176
7.2	Electrical stability of P3HT-OTFTs.....	180
7.2.1	Sample preparation and stress conditions.....	180
7.2.2	Constant gate-bias stress.....	180
7.2.3	Hot carrier stress.....	184
7.3	Summary.....	189
Chapter 8 Conclusions and Future Prospects.....		190
8.1	Conclusions.....	190
8.2	Future works.....	192
8.2.1	High performance TFTs on plastic substrate.....	192
8.2.2	T-gate poly-Si TFTs.....	193
8.2.3	P3HT-based organic TFTs.....	195
