ABSTRACT (in Chinese)	i
ABSTRACT (in English)	ii
ACKNOWLEDGEMENTS	iii
CONTENTS	iv
LIST OF FIGURES	vii
LIST OF TABLES	x

Chapter 1 Introduction..... 1

1.1 Motivation	1
1.2 Review of Related Works	3
1.2.1 Lossless Invisible Watermarking	3
1.2.2 Removable Visible Watermarking	3
1.3 Overview of Proposed Methods	4
1.3.1 Terminologies	4
1.3.2 Brief Descriptions of Proposed Methods	5
1.4 Contributions	7
1.5 Thesis Organization	8

Chapter 2 Hierarchical Online Image Authentication Centers with Multi-Capabilities 9

2.1 Overview of Proposed Concepts	9
2.1.1 Principle of Proposed Hierarchical Online Authentication Centers	9
2.1.2 Functions of Central and Local Authentication Centers	11
2.2 Functions in Proposed Centers	12
2.2.1 Online Search and Verification of Watermarked Images for Copyright Infringement Detection	13
2.2.2 Online Image Authentication with Security Protection of Authentication Certificates	16
2.2.3 Fast Watermark Verification by Progressive Image Matching	18
2.2.4 Copyright Protection of Palette Images by A Robust Lossless Visible	

Watermarking Technique.....	20
2.3 Discussions and Summary.....	21
Chapter 3 Online Search and Verification of Watermarked Images for Copyright Infringement Detection.....	23
3.1 Overview of Proposed Method.....	23
3.1.1 Motivation	23
3.1.2 Principle of Proposed Method	24
3.2 Proposed Method for Search and Verification of Watermarked Images	25
3.2.1 Employed Method for Detecting Images in Webpages	26
3.2.2 Proposed Method for Detecting Images in Public FTP Servers.....	27
3.2.3 Process for Verification of Watermarked Images	28
3.2.4 Overall Procedure for Proposed Online Search and Verification Method.....	30
3.3 Discussions and Summary.....	32
Chapter 4 Online Image Authentication with Security Protection of Authentication Certificates	33
4.1 Overview of Proposed Method.....	33
4.1.1 Motivation	33
4.1.2 Review of Secure Hash Algorithm-1.....	34
4.2 Online Image Authentication Procedures.....	38
4.2.1 Procedure for Registration as A Local Image Authentication Center.....	38
4.2.2 Online Procedure for Authentication of Suspected Images.....	39
4.3 Proposed Method for Security Protection of Authentication Certificates	42
4.3.1 Definition and File Format of Authentication Certificates.....	42
4.3.2 Proposed Method for Certificate Tampering Detection	45
4.4 Discussions and Summary.....	48
Chapter 5 Fast Watermark Verification by Progressive Image Matching.....	50
5.1 Overview of Proposed Method.....	50
5.1.1 Properties of JPEG Images	50
5.1.2 Review of Employed Invisible Watermarking Technique for JPEG Images.....	52
5.1.3 Proposed Idea of Fast Watermark Verification.....	55
5.2 Proposed Method for Fast Watermark Verification	55

5.2.1 Process of Fast Watermark Verification by Progressive Watermark Extraction	55
5.2.2 Detailed Algorithm	60
5.3 Determination of Threshold Value and Experimental Results	63
5.4 Discussions and Summary	67
Chapter 6 Copyright Protection of Palette Images by A Robust Lossless Visible Watermarking Technique	68
6.1 Overview of Proposed Method.....	68
6.1.1 Idea of Proposed Robust Lossless Visible Watermarking Technique.....	69
6.1.2 Properties of Palette and GIF Images	70
6.1.3 Principle of Proposed Method	70
6.2 Proposed Method for Copyright Protection of GIF Images	73
6.2.1 Embedding of Removable Visible Watermarks by A Neighborhood-Dependent Watermarking Technique	73
6.2.2 Lossless Recovery of Original Images by Removal of Visible Watermarks	76
6.2.3 Noise-Residual Recovery against Removal Attacks	77
6.2.4 Detailed Algorithms.....	79
6.3 Experimental Results.....	81
6.4 Discussions and Summary.....	86
Chapter 7 Conclusions and Suggestions for Future Works ..	88
7.1 Conclusions	88
7.2 Suggestions for Future Works	90
References	91

LIST OF FIGURES

Figure 1.1 A diagram illustrating proposed system of authentication centers with multi-capabilities.....	6
Figure 2.1 A hierarchical image authentication mechanism.....	10
Figure 2.2 Service functions in proposed centers.....	12
Figure 2.3 (a) Functions used in proposed method for online search and verification of watermarked images for copyright infringement detection. (b) A flowchart of proposed method for online search and verification of watermarked images.....	15
Figure 2.4 (a) Functions used in proposed method for online image authentication with a heavy loaded mode. (b) Functions used in proposed method for online image authentication with a slightly loaded mode. (c) A flowchart of proposed method for online image authentication.....	16
Figure 2.5 (a) Function used in proposed method for fast watermark verification by progressive image matching. (b) A flowchart of proposed method for fast watermark verification by progressive image matching.	18
Figure 2.6 (a) Function used in proposed method for copyright protection by lossless visible watermarking. (b) A flowchart of proposed method for copyright protection by lossless visible watermarking.....	20
Figure 3.1 (a) An example of detecting images in webpages within fourth layer using a depth-first search algorithm. (b) Searching sequence of (a).....	27
Figure 3.2 (a) An example of detecting images in an public FTP server using a breadth-first search algorithm. (b) Searching sequence of (a).	28
Figure 3.3 A flowchart of proposed method for verification of watermarked images.	29
Figure 3.4 A flowchart of overall procedure for online search and verification of watermarked images for copyright infringement detection.....	31
Figure 4.1 Message digest generation using SHA-1.	36
Figure 4.2 Elementary SHA-1 operation in iteration t.	36
Figure 4.3 Elementary SHA-1 operation in iteration t.	37
Figure 4.4 A flowchart of online image authentication.	41
Figure 4.5 Proposed format of certificate.....	44

Figure 4.6 An example of detecting a certificate which has been tampered with in proposed system.	48
Figure 5.1 DCT-based encoder compression process.....	51
Figure 5.2 DCT-based decoder decompression process.....	51
Figure 5.3 A flowchart of employed invisible watermark embedding process.....	53
Figure 5.4 A flowchart of employed invisible watermark extraction process.....	54
Figure 5.5 An example of clustering a watermark of size 32x32. S1 is the set of green pixels, S2 is the set of blue pixels, S3 is the set of pink pixels, and S4 is the set of white pixels.....	57
Figure 5.6 A flowchart of fast watermark verification by progressive image matching. ..	59
Figure 5.7 (a) Extracted watermark for each round. (b) Extracted watermark from an image subjected to expansion attack for each round.....	60
Figure 5.8 Five binary invisible watermark of size 128x128 and 32x32, respectively. (a) Watermark of National Chiao Tung University. (b) Watermark of National Palace Museum. (c) Watermark of digital archive program. (d) Watermark of computer vision laboratory in NCTU. (e) Watermark of National Museum of History.	63
Figure 5.9 Five cover images of size 512x512. (a) Color image of “Jet”, (b) Color image of “Lena”, (c) Color image of “Baboon”, (d) Color image of “Painting”, and (e) Color image of “Pepper”.....	64
Figure 6.1 An example of black watermark embedded pixels and white watermark embedded pixels. (a) Binary watermark. (b) Area of black watermark embedded pixels. (c) Area of white watermark embedded pixels.....	74
Figure 6.2 One-to-one mapping from sorted color palette to rearranged color palette by original order.	75
Figure 6.3 A flowchart of proposed watermark embedding process.....	76
Figure 6.4 A flowchart of proposed recovery process of stego-image.	77
Figure 6.5 Color mapping with an offset generated by a secret key.	78
Figure 6.6 A binary watermark image of size 200x200.	82
Figure 6.7 An example of results of applying proposed method. (a) A color image of “Lena”. (b) Stego-image after embedding visible watermark of size 128x128. (c) Losslessly recovered image with (b). (d) Lossy recovered image without a right key.	83

Figure 6.8 An example of results of applying proposed method. (a) A color image of “Painting”. (b) Stego-image after embedding visible watermark of size 128×128. (c) Losslessly recovered image with (b). (d) Lossy recovered image without a right key. 84

Figure 6.9 An example of results of applying proposed method. (a) A color image of “Jet”. (b) Stego-image after embedding visible watermark of size 256×256. (c) Losslessly recovered image with (b). (d) Lossy recovered image without a right key. 85

LIST OF TABLES

Table 5.1 Standard quantization table in JPEG compression standard (luminance component).	52
Table 5.2 Similarity in each of four rounds between original watermarks of size 128×128 and distorted watermark extracted from two different stego-images after being subject to the expansion attack.	66
Table 6.1 PSNR values of images after embedding visible watermarks.	82
Table 6.2 PSNR values of recovered images.	86
