

Acknowledgements

I must foremost offer my heartfelt thanks to my thesis adviser, Dr. Jinn-Moon Yang. His patience and encouragement lead me to overcome many hard times. His insights and suggestions always give me precious guides when I get lost in my way on research. Without him, this dissertation would not have been possible. I thank my laboratory partners for who have been helped me and given me suggestions in these two years. I want to especially thank my excellence laboratory partner, Tsai-Wei Shen and many works of this thesis are smooth going with his help and suggestion. With these outstanding partners, the boring times in research life always full with laughs, joy and creativities. I thank my college classmates and my friends in bioinformatics and biotechnology research groups. I enjoyed all vivid discussions we had on various topics and had lots of fun being a member of these fantastic groups. Finally I have to thank my parents and my brother for always being there when I needed them most, and for supporting me through all these years.
