

# Table of Contents

中文摘要	I
英文摘要	II
致謝	III
CONTENTS	IV
LIST OF TABLES	VII
LIST OF FIGURES	VIII
Chapter 1 Introduction	
1.1 The Role of IPMP in DRM system	1
1.2 Why IPMP-X	2
1.3 MPEG-4 IPMP-X Benefits	3
1.4 Security of IPMP-X Tools Communication	4
1.5 Introduction to Application Based on IPMP-X	5
1.6 IPMP Future-MPEG-21 IPMP	6
Chapter 2 System Reference Overall Description	
2.1 IM1	8
2.2 MPEG-4	8
2.2.1 Development and Architecture	8
2.2.2 The streaming framework	9
2.2.3 Delivery of MPEG-4 content	12
2.2.4 MPEG-4 BIFS	13
Chapter 3 MPEG4 IPMP-X Specification	
3.1 Hook versus. Extension	15
3.2 Term and Definition	15
3.3 IPMP-X Architecture	16
3.4 IPMP Tool Description Access	18
3.4.1 Delivery of Tool via Content	18
3.4.2 IPMP Tool List Descriptor	20
3.5 IPMP Tool Retrieval	22
3.6 Instantiation of IPMP Tools	23
3.6.1 The Characteristics of IPMP Tool Instantiation	23
3.6.2 The Rules of Protection Scope	23
3.6.3 Tool Context Data	24
3.6.4 The Meaning of IPMP Tool Control Point	25
3.6.5 The Message class for Tool Instantiation	26

3.7 IPMP Information Routing and Consumption Permission	27
3.7.1 The Characteristics of the Message Router	27
3.7.2 The Characteristics of IPMP Message	27
 Chapter 4 IPMP-X Software Reference Description	
4.1 Building the Reference Software	35
4.2 Software Reference Architecture	37
4.3 Key Component Description	
4.3.1 Instantiation of IPMP System	39
4.3.2 The Description of Message Router Implementation	39
4.3.3.The Description of Tool Manager Implementation	42
4.3.4 The Description of Control Point Implementation	43
4.3.5 The Description of Tool Module Implementation	45
 Chapter 5     An Implementation of Multimedia Content Guard Based on MPEG-4 IPMP-X	
5.1 Application 1 - Digital TV Conditional Access	48
5.1.1 The Digital TV Conditional Access Model	49
5.1.2 The Description of Conditional Access Application Scenario Based On MPEG-4 IPMP-X	51
5.1.3 Flow Description of Digital TV Conditional Access	52
5.1.4 Algorithm Description of Digital TV Conditional Access	53
5.1.5 An Implementation of Conditional Access Application Scenario Based on MPEG-4 IPMP-X	57
5.1.5.1 Trif File of Conditional Access Application Scenario	57
5.1.5.2The Description of Implementation of Conditional Access Application based on MPEG-4 IPMP-X	60
5.1.6 Demo for Conditional Access Application Scenario	62
5.2 Application 2- DVD Copy Protection	65
5.2.1 Detector Placement	66
5.2.2 The Description of DVD Copy Protection Scenario Based on MPEG-4 IPMP-X	66
5.2.3 Flow Description of DVD Copy Protection	67
5.2.4 Watermark Algorithm Description	69
5.2.5 An Implementation of DVD Copy Protection Scenario Based on MPEG-4IPMP-X	70
5.2.5.1 Trif file of DVD Copy Protection Application Scenario	70
5.2.5.2 The Description of Implementation of DVD Copy Protection Application Based on MPEG-4 IPMP-X	73

5.2.6 Demo for DVD Copy Protection Application Scenario	75
5.3 MPEG-21 Right Expression Language(REL) in an MPEG-4 IPMP-X	77
5.3.1 Introduction to MPEG-21 Right Expression Language	77
5.3.2 IPMP Master Tool and IPMP REL Tool for the MPEG-4 IPMP-X Framework	81
Chapter 6 Conclusion	85
REFERENCE	89
作者簡歷	91

## List of Tables

Table 3-1 Stream Type Table, pp.12 of [1]	19
Table 3-2 The Related Message Class for Tool Manager	22
Table 3-3 Control Point Code Description, pp.14 of [1]	25
Table 3-4 Tags for Messages Extending IPMP_ToolMessageBase	28
Table 3-5 IPMP Data Specification and Purpose, [7]	31

## List of Figures

Figure 1-1 DRM System Using MPEG IPMP Solution	2
Figure 2-1 MPEG-4 Standard Structure, [31]	9
Figure 2-2 MPEG-4 System Decoder Model, [31]	10
Figure 2-3 MPEG-4 Synchronization Layer, [31]	10
Figure 2-4 MPEG-4 Object Descriptor and Elementary Stream Descriptor, [31]	12
Figure 2-5 MPEG-4 Delivery Framework, [31]	13
Figure 3-1 Mapping of IPMP Extensions to MPEG-4 System Architecture,[1]	16
Figure 3-2 Architecture Diagram for Walkthrough Concepts,[1]	16
Figure 3-3 MPEG-4 essential parts of an Object descriptor and ES descriptor	18
Figure 3-4 Initial Object Descriptor linking scene description to elementary stream, [31]	21
Figure 3-5 Examples of Use and Scope of IPMP Descriptors and Declarators,[1]	25
Figure 3-6 Relationship between ESD and DecoderConfigDescriptor	25
Figure 3-7 MPEG-4 IPMP, [5]	26
Figure 3-8 The Control Flow for IPMP-X	29
Figure 4-1 MPEG-4 with IPMP-X Terminal, pp.4 of [3]	36
Figure 4-2 Architecture of IM1 with IPMP-X, pp.2 of [8]	37
Figure 5-1 Embedded within the Set-top Box for CA Module, Motorola	50
Figure 5-2 Split between the Set-Top and Removable Card for CA Module, Motorola	50
Figure 5-3 Completely on a Removable Module for CA Module, Motorola	50
Figure 5-4 Conditional Access Application Scenario Based On MPEG-4 IPMP-X	51
Figure 5-5 A Flow of Conditional Access Application Scenario Based On MPEG-4 IPMP-X	53
Figure 5-6 Encrypt / Decrypt of Conditional Access Application Scenario	55
Figure 5-7 Principles of public-key cryptography	55
Figure 5-8 A Flow of Control Word for Descramble	56
Figure 5-9 Demo 1 for Digital TV Conditional Access	63
Figure 5-10 Demo 2 for Digital TV Conditional Access	63
Figure 5-11 Demo 3 for Digital TV Conditional Access	64
Figure 5-12 Watermark Detector Placement	66
Figure 5-13 DVD Copy Protection Scenario Based on MPEG-4 IPMP-X	67
Figure 5-14 DVD Copy protection Scenario on MPEG-4 IPMP-X Terminal Architecture	67
Figure 5-15 Watermark Encoder Control Flow	68
Figure 5-16 Watermark Decoder Control Flow	68

Figure 5-17 Demo 1 for DVD Copy Protection	75
Figure 5-18 Demo 2 for DVD Copy Protection	76
Figure 5-19 REL Data Model, pp.2 of [9]	78
Figure 5-20 The Example of REL License, pp.2 of [9]	79
Figure 5-21 REL Extension Mechanism, pp.3 of [9]	74
Figure 5-22 Use Date and Password to query through MPEG-21 REL Constructing	81
Figure 5-23 REL license and query contained in IPMP_RightsData message and transferred through security channel	82
Figure 5-24 Extract items, validates request and conditions	83
Figure 5-25 IPMP_RELTool sends back to Master Tool via IPMP_CanProcess	83
Figure 5-26 IPMP_RELTool sends back to Master Tool via IPMP_OpaqueData message	84
