

# 登革熱病毒 2 型 PL046 非結構性蛋白

## NS2A、NS2B、NS4A 及 NS4B 之功能性研究

研究生：楊馥嘉

指導教授：楊昀良 博士

國立交通大學生物科技研究所

### 中文摘要

登革熱病毒屬於黃質病毒科(*Flaviviridae*)黃質病毒屬(*Flavivirus*)。此屬病毒會造成許多人類的感染性疾病。在登革熱病毒產生蛋白質的過程，會先產生單一個蛋白質轉譯區，再切割成 10 個獨立的蛋白質。其中，NS2A、NS2B、NS4A 及 NS4B 是較小的非結構性蛋白，具有疏水的特性，因此可能為和細胞膜有關的蛋白質。這四種蛋白質中，只有 NS2B 已知會參與蛋白切割酶反應，而 NS2A、NS4A、NS4B 尚未被鑑定出確切的生化功能。為研究登革熱病毒此四蛋白質的結構與功能，首先必須建構及表現此四種基因並對這四種蛋白質做功能性測試。本研究嘗試將這四種蛋白質在大腸桿菌和哺乳類細胞中，以加上 HA-His (influenza hemagglutinin-polyhistidine protein)的融合蛋白(fusion protein)形式表現。為了在大腸桿菌表現系統中表現此四種蛋白質，遂將 NS2A、2B、4A 及 4B 的轉錄區域構築在修飾過的 pET-30a(+)表現載體——pETΔ5T 上。NS2B、4A 及 4B 的 HA-His 融合蛋白可在大腸桿菌中，以西方墨點法測得。NS2A 的轉錄產物則可以北方墨點法測得。NS2B、4A、4B 在 BHK-21 以及 NS2A 在 293T 細胞中表現，也可以西方墨點法偵測。溶斑試驗(plaque assay)的結果顯示：表現 NS2B 的細胞經登革熱病毒感染後，會形成較對照組小的溶斑，而表現 NS4A 的細胞則會產生較大的溶斑。

# **Functional Expression of Nonstructural Proteins NS2A, NS2B, NS4A, and NS4B of Dengue Virus Type 2 PL046 Strain**

Student: Fu-Chia Yang

## **Abstract**

Dengue virus is a member of *flaviviridae*, which cause many infectious diseases of human. Dengue virus encodes 10 proteins in a single open reading frame. Among them, NS2A, 2B, 4A and 4B are small non-structural proteins exhibiting hydrophobicity profiles, suggesting their role as membrane-associated proteins. NS2B has been suggested to involve in protease activity while specific biological functions for NS2A, 4A and 4B have not been identified. With the interest to study the structure and function of these four proteins, I attempt to achieve cloning, expression, and functional assay of these four genes. Their proteins were expressed as HA-His (influenza hemagglutinin-polyhistidine protein) fusion proteins in *E. coli* and mammalian cells. For the expression in *E. coli*, the coding region of NS2A, 2B, 4A and 4B were successfully cloned into a modified pET-30a(+) vector, pETΔ5T. Recombinant proteins of NS2B, 4A and 4B fused with HA-His tag could be detected in *E. coli* by Western blotting analysis. Whereas, the transcripts of NS2A were detected by Northern blot. Expressions of NS2B, 4A, and 4B in BHK-21 and NS2A expressed in 293T cells were also confirmed by Western technique. The results of plaque assay suggested that cells expressing NS2B formed smaller plaques than negative control while cells expressing NS4A formed larger plaques.

## Acknowledgement

經過了兩年多的努力之後，總算走到最後這一步，要感謝的人太多；首當其沖，當然是要感謝楊昀良老師，無論是在實驗上的支持，或是在研究精神的訓練，以及最後論文的修改方面，老師總是給予我最大的幫助。再來要感謝實驗室裡的好伙伴們：柏吟、建季，共同奮鬥了兩年多，我們總算都畢業了；婷尹，加油！下一個就換妳了；怡瑾、志豪，有個這麼脫線的學姊，沒幫上你們什麼忙，這一年多來真是苦了你們啦！真的要感謝你們，為實驗室增添不少歡樂，每次悶著頭做實驗，聽到你們的對話都會忍不住偷笑；美惠學姊，雖然很少有機會跟你討論實驗，不過那幾次討論提醒了我一些很重要卻被忽略的事情，真的很感謝妳；感謝碩一及大學部的學弟妹們，實驗室有了你們變得好熱鬧好活潑；當然還要感謝阿貴，妳對我的照顧，真的要我叫妳一聲媽都不為過。

接下來要感謝台大分醫所的呂勝春老師以及涵怡和涵婷學姊，雖然我人已經離開實驗室，可是你們都還是很關心我的實驗，不時的給我意見，謝謝你們。感謝以前的好同學們：可均、涵葳、淑雯和盈方，在我需要幫助的時候，妳們總是毫不猶豫地伸出援手；蓉瑩、有潔、姿宜、嘉伶、玲儀，在研究所最難熬的時候有妳們的陪伴，我真的很幸運。

還有表哥和表嫂，感謝你們在生活上提供的幫助。最重要的，感謝爸爸、媽媽和哥哥，有你們的疼愛，我一定是世界上最幸福的人！該感謝的人真的太多太多了，最後在這一併感謝，因為你們的幫助我才能夠順利畢業，謝謝你們。
