

CONTENTS

ABSTRACT(in Chinese)	i
ABSTRACT(in English)	ii
ACKNOWLEDGEMENTS	iii
CONTENTS	iv
LIST OF FIGURES	vii
LIST OF FIGURES	vii
Chapter 1 Introduction	1
1.1 Motivation.....	1
1.2 General Review of Related Works.....	2
1.3 Overview of Proposed Methods.....	3
1.3.1 Terminologies	3
1.3.2 Brief Descriptions of Proposed Methods.....	4
1.4 Contributions.....	6
1.5 Thesis Organization	6
Chapter 2 Review of Related Works and MPEG-4 Standard	7
2.1 Review of Techniques for Visible Watermarking in Video.....	7
2.2 Review of Techniques for Active Agent	7
2.3 Review of Techniques for Video Authentication	8
2.4 Review of Techniques for Video Data Hiding	9
2.5 Review of MPEG-4 Standard	9
2.5.1 Brief Descriptions of MPEG-4 Standard	9
2.5.2 Structure of MPEG-4 Video Bitstream	11
Chapter 3 Copyright Protection of MPEG-4 Videos by Active Watermarking and Limited Play Counts	13
3.1 Introduction.....	13
3.1.1 Problem Definition.....	14
3.1.2 Proposed Idea and System Configuration.....	14
3.2 Scheme for Video Play-Count Limitation.....	16
3.2.1 Idea of Proposed Scheme.....	16
3.2.2 Detailed Algorithm.....	17
3.3 Embedding Visible Watermarks in MPEG-4 Videos	20
3.3.1 Proposed Idea.....	20
3.3.2 Process for Embedding Visible Watermarks in I Frames.....	21

3.3.3	Process for Embedding Visible Watermarks in P and B Frames	.23
3.4	Recovery of Original Videos by Removing Visible Watermarks27
3.4.1	Process for Extraction of Personal Data27
3.4.2	Process for Recovery of I Frames28
3.4.3	Process for Recovery of P and B Frames30
3.5	Experimental Results32
3.6	Discussions and Summary38
Chapter 4 Authentication of Surveillance Video Sequences and Contents by		
Hiding Motion Vector Information	39
4.1	Introduction39
4.1.1	Problem Definition40
4.1.2	Proposed Idea of Authentication41
4.2	Embedding of Authentication Signals in Surveillance Videos42
4.2.1	Principle of Authentication Signals42
4.2.2	Process for Generating Authentication Signals by Analyzing Motion Vectors in P Frames43
4.2.3	Process for Embedding Authentication Signals in I Frames46
4.3	Authentication of Video Sequences and Contents49
4.3.1	Idea for Authentication49
4.3.2	Process for Extracting Authentication Signals Using Voting Technique51
4.3.3	Detection and Verification of Temporal Tampering for Suspected Videos54
4.3.4	Detection and Verification of Spatial Tampering for Suspected Videos55
4.4	Experimental Results59
4.5	Discussion and Summary63
Chapter 5 Searches of Motions in Surveillance Videos by Image Watermarking		
Technique	64
5.1	Introduction64
5.1.1	Problem Definition65
5.1.2	Proposed Idea65
5.2	Detection and Classification of Moving Objects66
5.2.1	Review of Employed Method of Human Detection66
5.2.2	Detailed Algorithm68
5.3	Real-Time Embedding of Moving Object Information71
5.3.1	Principle of Proposed Method71
5.3.2	Proposed Embedding Process72

5.4	Extraction of Moving Object Information	74
5.4.1	Principle of Proposed Method	74
5.4.2	Proposed Extraction Process.....	75
5.5	Experimental Results	77
5.6	Discussions and Summary	79
Chapter 6 Searches of Targeted Persons in Recorded Videos by Hiding of Special Information.....		81
6.1	Introduction.....	81
6.1.1	Problem Definition.....	82
6.1.2	Proposed Idea and System Configuration.....	83
6.2	Review of Smart Card Techniques.....	83
6.2.1	A Brief Introduction to Smart Cards	83
6.2.2	Reading Personal Identification Data from Smart Cards.....	84
6.3	Real-time Embedding of Personal Identification Data into Videos	86
6.3.1	Principle of Proposed Method	87
6.3.2	Proposed Embedding Process	87
6.4	Experimental Results	90
6.5	Discussions and Summary	93
Chapter 7 Conclusions and Suggestions for Future Works		94
7.1	Conclusions.....	94
7.2	Suggestions for Future Works	95
References		96

LIST OF FIGURES

Figure 2.1 Hierarchical structure of MPEG-4 video bitstream.....	11
Figure 3.1 System Configuration.....	15
Figure 3.2 Checking Process of video play count.....	16
Figure 3.3 An illustration of selected pair of DCT coefficients in an 8×8 luminance block.....	18
Figure 3.4 Flowchart of process for hiding personal data.	19
Figure 3.5 Location of significant coefficients in the 8×8 luminance block.	20
Figure 3.6 Flowchart of watermark embedding process for I frames.....	23
Figure 3.7 Flowchart of watermark embedding process for P or B frames.....	25
Figure 3.8 Flowchart of the watermark removal process in I frames.	29
Figure 3.9 Flowchart of the watermark removal process in P or B frames.	31
Figure 3.10 A watermark binary image with size 30×30.....	33
Figure 3.11 Six frames of the original video. (a) The first frame (I frame). (b) The second frame (B frame). (c) The third frame (P frame). (d) The 4th frame (B frame). (e) The 5th frame (P frame). (f) The 6th frame (B frame). (continued).....	33
Figure 3.12 Six frames of the watermarked video. (a) The first frame (I frame). (b) The second frame (B frame). (c) The third frame (P frame). (d) The 4th frame (B frame). (e) The 5th frame (P frame). (f) The 6th frame (B frame). (continued).....	34
Figure 3.13 Six frames of the recovered video. (a) The first frame (I frame). (b) The second frame (B frame). (c) The third frame (P frame). (d) The 4th frame (B frame). (e) The 5th frame (P frame). (f) The 6th frame (B frame). (continued).....	35
Figure 3.14 (a) A recovered video with the play count greater than zero. (b) A pop-up message dialog saying that the play count of the video has run out. (c) A watermarked video with the play count equals zero. (d) A pop-up message dialog saying that the network is not available. (e) A watermarked video resulting from some network problems. (f) A watermarked video played on an improper video player. (continued).....	36
Figure 4.1 Illustration of replacement.....	41
Figure 4.2 Illustration of cropping.....	41
Figure 4.3 Illustration of insertion.	41
Figure 4.4 Illustration of the proposed authentication signal embedding method.....	43
Figure 4.5 Flowchart of process for generating authentication signals.....	45

Figure 4.6 Flowchart of the process for embedding authentication signals.	48
Figure 4.7 Illustration of the proposed video contents and sequences authentication method.....	50
Figure 4.8 Illustration of extracting authentication signals by the voting technique...52	
Figure 4.9 Illustration of detecting and verifying spatial tampering of suspected videos.	58
Figure 4.10 Six frames of the original video. (a) The first frame (I frame). (b) The second frame (P frame). (c) The third frame (P frame). (d) The 4-th frame (P frame) (e) The 5-th frame (P frame). (f) The 6-th frame (P frame) (continued).....	59
Figure 4.11 Six frames of the protected video. (a) The first frame (I frame). (b) The second frame (P frame). (c) The third frame (P frame). (d) The 4-th frame (P frame) (e) The 5-th frame (P frame). (f) The 6-th frame (P frame) (continued).....	60
Figure 4.12 Six frames of the tampered video. (a) The first frame (I frame). (b) The second frame (P frame). (c) The third frame (P frame). (d) The 4-th frame (P frame) (e) The 5-th frame (P frame). (f) The 6-th frame (P frame) (continued).....	61
Figure 4.13 Six frames of the authenticated video. (a) The first frame (I frame). (b) The second frame (P frame). (c) The third frame (P frame). (d) The 4-th frame (P frame) (e) The 5-th frame (P frame). (f) The 6-th frame (P frame) (continued).....	62
Figure 5.1 Illustration of proposed detection and classification method.	67
Figure 5.2 Illustration of a binary image representing a simplified elliptical model for skin color detection.	68
Figure 5.3 Illustration of the elliptical filter for detecting the human face.....	68
Figure 5.4 Flowchart of the human detection algorithm.....	69
Figure 5.5 Illustration of proposed method for embedding moving object information in real time.....	71
Figure 5.6 Flowchart of process for embedding moving object information.	73
Figure 5.7 Illustration of proposed scheme for searching motions.....	75
Figure 5.8 Six frames of the resulting stego-video. (a) The first frame (I frame). (b) The second frame (B frame). (c) The third frame (P frame). (d) The 4th frame (B frame). The 5th frame (P frame). The 6th frame (B frame). (continued).....	77
Figure 5.9 (a) The proposed user interface for searching motions. (b) The searching result of a moving person. (continued).....	78
Figure 6.1 Illustration of the proposed system configuration.	82

Figure 6.2 Illustration of hierarchical structure of the file system in the smart card...85

Figure 6.3 Structure of command and response APDU.....86

Figure 6.4 Illustration of the proposed embedding process of personal.....87

Figure 6.5 Flowchart of the proposed embedding process of personal identification data.....89

Figure 6.6 Equipments for simulating an ATM system with security surveillance capability.90

Figure 6.7 Six frames of the resulting stego-video. (a) The first frame (I frame). (b) The second frame (B frame). (c) The third frame (P frame). (d) The 4th frame (B frame). (e) The 5th frame (P frame). (f) The 6th frame (B frame).91

Figure 6.8 The proposed (a) user interface and (b) searching result.92
