

Acknowledgement

I first express my cordial appreciation to Professor Hsin-fei Meng, who always leads to shortcuts to the problems. Also I thank Professor Sheng-fu Horng to several useful guidelines and discussions. My thesis research cannot be so smooth without the following kind co-workers. Special thanks to Shin-Rong Tseng, the big brother, for leading me to production processes. I thank Huan-chung Lai to measure most of the film thicknesses. Chi-hung Yeh also helped a lot to this regard. Erwin Rossen, an exchange student from Netherlands, also took part in my research work for three months and I leaned a lot from him, especially for taking good notes during processes of experiments. The last but not least, I have to thank my junior co-worker Kai-chin Tang, who helps a lot for tedious work. I hope that he will do a good job in the following research.
