ABSTRACT

The National Health Insurance is a kind of social insurance. At first, the major purpose of establishment is via the design of insurance system to use the power of bulk people to help the weak group of people to obtain health care to some certain level. The financial crisis of The National Health Insurance appeared due to the aging of population, and increasingly expensive medical appliances, the increase in the fees of medical treatment. It is difficult to adjust the rating of health insurance. The financial situation and budget is critical in the local government. The income of insurance payment is getting lower and lower. The waste of medical resources makes the situation worse.

In this research, we exploit the effective and practical methods in forecasting and prediction theories or tools. We use the actual data of financial revenue and expenditure of Northern Branch, Bureau of National Health Insurance. We try to establish the forecasting model of financial revenue and expenditure of health insurance. It could provide a consultation of financial revenue and expenditure forecasting of Northern Branch, Bureau of National Health Insurance.
