

Acknowledgements

I am grateful to have many people contribute to the accomplishment of this master thesis.

First of all, I would like to sincerely appreciate my advisor, Prof. Wei Hwang. With his edification and wise advices, and with his guidance and instruction, I am inspired in this research field and have further interest on my advanced research.

Following, I would like to thank Po-Tsang Huang, PhD candidate of NCTU, who gave me great support through the thesis with constructive suggestions and strongly encouragement. He helps me build up all the confidence and knowledge needed in doing research. Without his kindness, I would never be able to get through every difficulty encountered on the way toward my goal.

In addition, I would like to thank Po-Tsang Huang, Ming-Hung Chang, Wei-Chih Hsieh, and Hao-I Yang at Low-Power SoC laboratory for their accompany during the two years in graduate school at NCTU. They help me a lot on the thesis, and give me a colorful life full of delights. Without them, there is half my heart gone because they made it whole.

Finally, I would also like to thank my family for their concerns and understanding, as well as financial support. They always encourage me with patience and love every time I am disappointed. With their support, I could bravely stride straight and fulfill my dream.
