Chapter 1	
Introduction	1
1.1 Portable Display Technology	1
1.2 Liquid Crystal Displays	2
1.2.1 Transmissive LCD	2
1.2.2 Reflective LCD	3
1.2.3 Transflective LCD	5
1.3 Organic Electroluminescence Displays	6
1.4 Motivation and Objective of this thesis	7
1.5 Organization of this thesis	8
Chapter 2 Principle	10
2.1 Overview	10
2.2 Principle of Reflective Liquid Crystal Displays	10
2.2.1 Reflective LCDs	10
2.3 Operation Principle of EL devices	14
2.3.1 Electroluminescence	14
2.3.2 The Electroluminescence Structures	15
2.3.3 Passivation of EL Devices	16
2.4 Addressing Schemes for LCD and OLED displays	18
2.4.1 Passive Matrix Addressing	18
2.4.1.1 Passive Matrix LCDs	18
2.4.1.2 Passive Matrix OLED Displays	18
2.4.2 Active Matrix Addressing	19
2.4.2.1 Active Matrix LCDs	19
2.4.2.1 Active Matrix OLED Displays	20
2.5 Non-uniformity of the OLED panel	22
2.5.1 The variation of Threshold Voltage	22
2.5.2 IR Drop	23
2.6 Emi-flective Display of R-LCD and Electroluminescence Device	23
2.6.1 The Variation of Threshold Voltage	23
2.6.2 The Operation of the Emi-flective Display	24

2.6.3 The Pixel Circuit for Emi-flective Display.....	26
2.6.4 Operation of the Pixel Circuit.....	27
2.6.4.1 Operation in the Emissive Mode.....	27
2.6.4.2 Operation in the Reflective Mode.....	28
2.7 Summary.....	29

Chapter 3 Fabrication and Measurement Instrument

3.1 Overview.....	30
3.2 Fabrication Process.....	30
3.3 Measurement Instruments.....	34
3.3.1 Optical Performance Measurement System.....	34
3.3.1.1 ConoScope.....	34
3.3.2 Surface Measurement System.....	36
3.3.2.1 Atomic Force Microscope.....	36

Chapter 4 Simulation Results and Discussions

4.1 Overview.....	38
4.2 Operation in the Emission Mode.....	39
4.2.1 Transient Response.....	40
4.2.2 Threshold Voltage Variation.....	42
4.2.3 Turn-on Voltage Shift of OLED.....	43
4.3 Operation in the Reflective Mode.....	45
4.3.1 Transient Response.....	45
4.4 Summary.....	47

Chapter5 Experimental Results and Discussions

5.1 Overview.....	48
5.2 Surface Morphology.....	48
5.2.1 ITO Substrate.....	48
5.2.2 Passivation Layer.....	50
5.2.3 Alignment Layer.....	51
5.3 Electrical Characteristics.....	52
5.3.1 Top Emission OLED.....	52
5.3.2 The Stability of the Operation.....	54
5.4 Optical Performance.....	55
5.4.1 The Ambience Contrast Ratio.....	55
5.4.2 The Viewing Angle.....	58
5.4.3 The Visual Performance.....	59
5.5 Discussion.....	60

5.5.1 The Optical Performance.....60
5.5.2 The Electrical Performance.....63
5.6 Summary.....68

Chapter6 Conclusions and Future Work

6.1 Conclusions.....69
6.2 Future Work.....70

Figure Caption

Fig. 1.1 Market survey of small and medium size panel.....	1
Fig. 1.2 Transmissive LCD.....	3
Fig. 1.3 Reflective LCD.....	4
Fig. 1.4 (a) A reflective LCD	
(b) A transmissive LCD	4
Fig. 1.5 Transflective LCD.....	5
Fig. 2.1 (a) Schematic drawing of a direct view reflective LCD.	
(b) The Azimuth angle of various components in the reflective LCD.....	11
Fig. 2.2 Energy band diagram of OLED and electron-hole recombination	
in the forward bias condition.....	15
Fig. 2.3 Definition of aperture ratio.....	16
Fig. 2.4 Structure of (a) bottom emission, (b) top emission	
and (c) transparent device.....	16
Fig. 2.5 Pixel configuration of active-matrix LCD.....	20
Fig. 2.6 1T1C pixel circuit for AM-OLED.....	21
Fig. 2.7 2T1C pixel circuit for AM-OLED with (a) n-channel T_{DV} and	
(b) p-channel T_{DV}	22
Fig. 2.8 The structure of the emi-flective display.....	23
Fig. 2.9 (a) Bright state and (b) dark state in the reflective mode.....	25
Fig. 2.10 (a) Bright state and (b) dark state in the emissive mode.....	25
Fig. 2.11 The diagram of the proposed pixel circuit.....	26
Fig. 2.12 Time diagram of the pixel circuit in the emissive mode.....	27
Fig. 2.13 Time diagram of the pixel circuit in the reflective mode.....	28

Fig. 2.14 The simplified pixel circuit in the reflective mode.....	29
Fig. 3.1 The flow chart of the fabrication process of the emiflective display.....	31
Fig. 3.2 Schematic diagram of a conoscope.....	34
Fig. 3.3 The concept of a conoscope receiver.....	35
Fig. 3.4 The function of a conoscope lens system.....	36
Fig. 3.5 Schematic diagram of AFM.....	37
Fig. 3.6 The operation principle of AFM.....	37
Fig. 4.1 The transient response of (a) gate voltage of DTFT, (b) gate-to-source voltage of DTFT and (c) OLED current.....	41
Fig. 4.2 The simulation results of the OLED current with different threshold voltage of poly-Si TFTs.....	42
Fig. 4.3 The electrical characteristics of OLEDs with different sheet resistance.....	43
Fig. 4.4 The simulation results of the OLED with different sheet resistance.....	44
Fig. 4.5 The transient response of (a) OLED current , (b) voltage of node1 and (c) LC voltage.....	46
Fig. 4.6 Schematic diagram of emi-flective display.....	47
Fig. 5.1 (a) The roughness and (b) the thickness of ITO substrate.....	49
Fig. 5.2 (a) The SEM photograph and (b) the roughness of thin film encapsulation.....	50
Fig. 5.3 The thickness of alignment layer.....	52
Fig. 5.4 The electrical characteristics with the relationship between (a) luminance and voltage and one between (b) luminance and current.....	54
Fig. 5.5 The lifetime of the emiflective display.....	55
Fig. 5.6 The ambience contrast ratio of the emission mode.....	56
Fig. 5.7 The configurations of the measurements with (a) one circular polarizer	

and (b) two cross linear polarizers	57
Fig. 5.8 The ambience contrast ratio of the reflective mode.....	57
Fig. 5.9 The viewing angle of the reflective mode with (a) one circular polarizer and (b) two cross linear polarizers	58
Fig. 5.10 The viewing angle of the emission mode (a) with and (b) without segment recorder	59
Fig. 5.11 The photograph of the reflective and emission mode.....	59
Fig. 5.12 The photograph of the emi-flective display.....	60
Fig. 5.13 Schematic diagram of the emi-flective display.....	61
Fig. 5.14 Configurations of hybrid displays proposed by (a) E. Lueder and (b) Jiuw-Haw Lee.	62
Fig. 5.15 The diagram of the proposed pixel circuit.....	64
Fig. 5.16 The pixel circuits proposed by (a) Mutsumi Kimura and (b) Jiun-Haw Lee.....	65
Fig. 5.17 The schematic diagram of the optimized structure in the reflective mode.....	66
Fig. 5.18 The simulated contrast ratio of (a) optimized MTN R-LCD and (b) fabricated TN R-LCD at the wavelengths of 450, 550,and 650 nm...	67

List of Tables

Table 4.1 Simulation parameters.....	39
Table 4.2 The comparison of different pixel circuits for uniformity.....	44
Table 5.1 Experimental parameters of spinning coating.....	51
Table 5.2 The pretilt angle of the alignment layer.....	51
Table 5.3 The deviation of operating voltage of top emission OLED.....	53
Table 5.4 The comparison of different hybrid display structures.....	62
Table 5.5 The comparison of different pixel circuits for hybrid displays.....	65
