
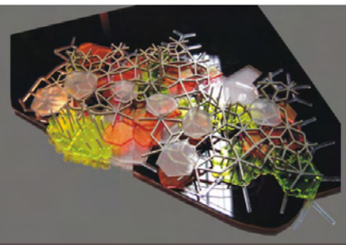
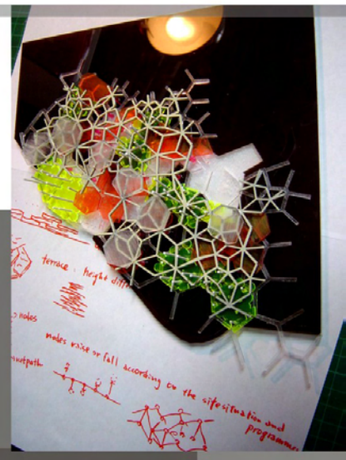
Conceptual programmatic field

Circular icon becomes a medium of programmatic field for making distribution of neighborhood and touristic programs.
Starting from basic programs on site, this serial developing diagrams reveal a keynote characteristic and related linkage of Bitmap.

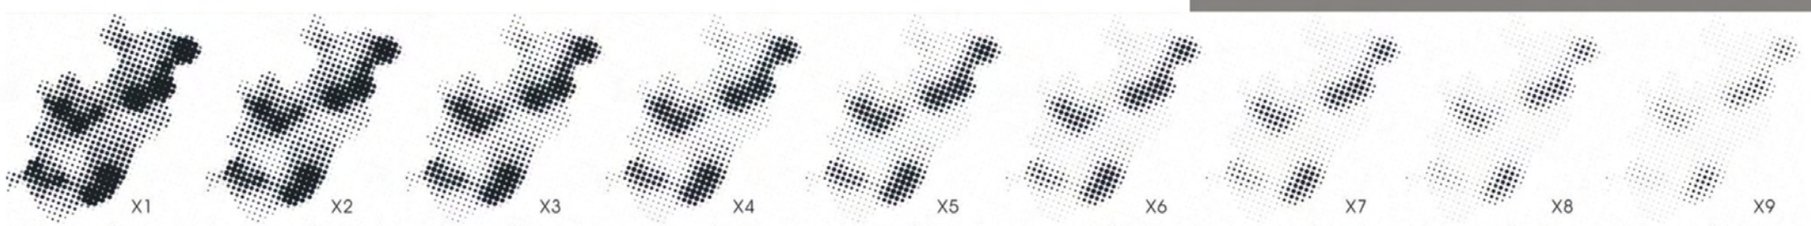




Conceptual multi-layered model

This is a conceptual model of patterns which tells the crucial point
that the whole construction should be made of diversified layers of field.
It could contains layers of path, deck, structure and plant map.

Diagram model

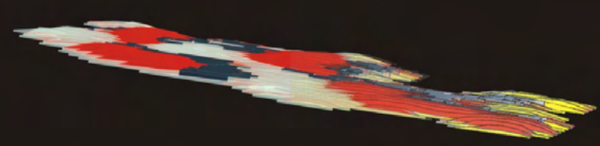


Repetitoin of bitmapping of same resolution

Negative visual movement

Repetitive bitmapping process of image contains a crucial phenomenon of metamorphosis.
Gradual changements of positive and negative visual movement acclaim an idea
of tidal height.
Through waterface cutting the whole landscape wavy pattern, it reveals different modules
of 3D composition at different time schedule.

Field changement



S=1/1000

Data-scape

According to the differences of activity intensity,
I create a bitmap which becomes the source of digital landscape height.
The greater the dot scale is, the higher the elevation becomes.
